## Abstract

AssureX Claim Engine evaluates warranty claims for consumer electronics, home appliances and industrial tools. A customer or service center registers a product from its receipt (read by OCR), files a claim with evidence, and the application pre-processes the claim into model features. A calibrated Python classification model (HistGradientBoosting, 89.3% test accuracy on 225 unseen claims) scores the structured record; the same claim is drawn as a Claim Summary Card and classified by a Google Teachable Machine model (93.8% test accuracy). The two predictions and their confidences are compared (Strong Match, Acceptable Match, Weak Match, Model Disagreement, Uncertain Result), the category's warranty policy is executed from JSON configuration, contradictions, missing documents and duplicates are detected, and a decision table produces Likely Valid, Likely Invalid or Manual Review Required. Anything uncertain goes to a human reviewer, and every step is recorded in an audit trail. The application has four roles (customer, service-center staff, claim reviewer, administrator), 295 automated tests and 34 browser tests.

The model comparison report (SRS §1.10 item 6) on 225 unseen test claims, each with a structured record for the Python model and its Claim Summary Card for Google Teachable Machine.

# 1. Model prediction and confidence comparison

225 unseen claims. Python model on the structured record; Google Teachable Machine on the claim's canonical Claim Summary Card; rules and decision table as in production.
